OBJETIVO

I'm a scripting and tasks automating passionate, who discovered the development by watching some friends working on an HTML page, since then I knew that it was my love and started studying and developing. I've started on frontend development with HTML5, CSS3 and Vanilla JS, so I jumped to PHP and started learning databases with MySQL and backend with Python. Then I studied C#, Java and more Python before meeting NodeJS, React and React Native, that's my main stack this days.

RODRIGO M. CORDEIRO

JOBS

2016/05 – 2019/08

Service desk Analyst • Beltis Solutions

2019/09 – 09/2020

IT Manager • Akta Motors

2020/09 – 20210/09

IT Analyst • Beltis Solutions

I worked as IT analyst for a almost five years, being responsible for bilingual attending and technical agenda, I was also responsible for server monitoring and maintenance and for implementing a Zabbix, GLPI and Grafana integrated environment with a chatbot for Telegram built in Python. Today I'm a fullstack developer responsible for build mobile, websites and desktop applications for WMS systems.
